Application

Isoway® is a chloride-free liquid de-icer, specifically designed and formulated with facility management requirements in mind. This product is active at low temperatures (-20°c) and offers exceptional ice control, far superior to salt brines.

Isoway® rapidly penetrates the snow pack, quickly breaking the bond between ice and the ground surface and allowing easy removal by brushing or shovelling. Isoway® remains on the ground to inhibit further ice formation on the treated surfaces.

Ice Prevention (Anti-icing)	15ml/m²
Ice Removal (De-icing)	30ml/m²

Why Choose Isoway®?

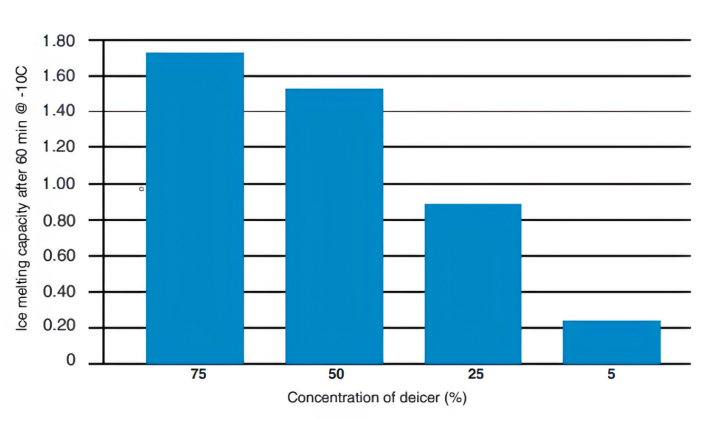

Isoway® is designed for use on footpaths, public thoroughfares, and any areas where ice may pose a risk to pedestrians and other users.

Safer for use on concrete, wood, and around plants and vegetation, it is also non-harmful to vehicles and equipment.

Isoway® is supplied as a ready-to-use liquid formula, making it easy to apply, with no requirement for protective clothing.

Unlike traditional salt, Isoway® is non-corrosive.

Compared to salt, Isoway® remains effective in icy conditions at temperatures as low as -25°C.

Why OMEX De-icer?

- 30 Years of experience
- Products manufactured in the UK
- Network of reliable and qualified hauliers
- Part of the OMEX Group, leading company in agriculture, waste water and bio gas

Pack Sizes

10L
20L
600L
1000L

Product Specification

- Appearance : Clear to straw coloured solution
- Formula: $KC_2H_3O_2$
- Potassium acetate: 26% (w/w)
- pH: 7.13 - 8.5
- Specific Gravity: 1.13 - 1.18
- Viscosity: 10 - 20 mPa
- Freezing Point: < -25°C
